

# Space Launch System (SLS)

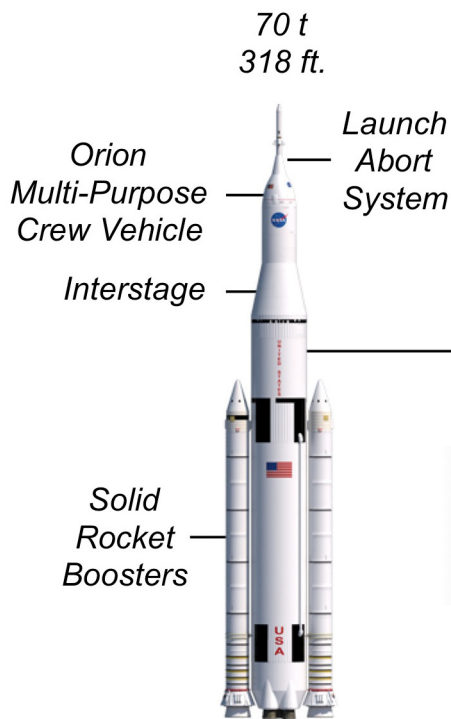

## Fun Facts

*The Biggest, Most Capable Rocket Ever Built  
for Entirely New Human Exploration Missions Beyond Earth's Orbit*

- Designed to be flexible and evolvable for crew or cargo missions
- Safe, affordable and sustainable to advance America's exploration of space

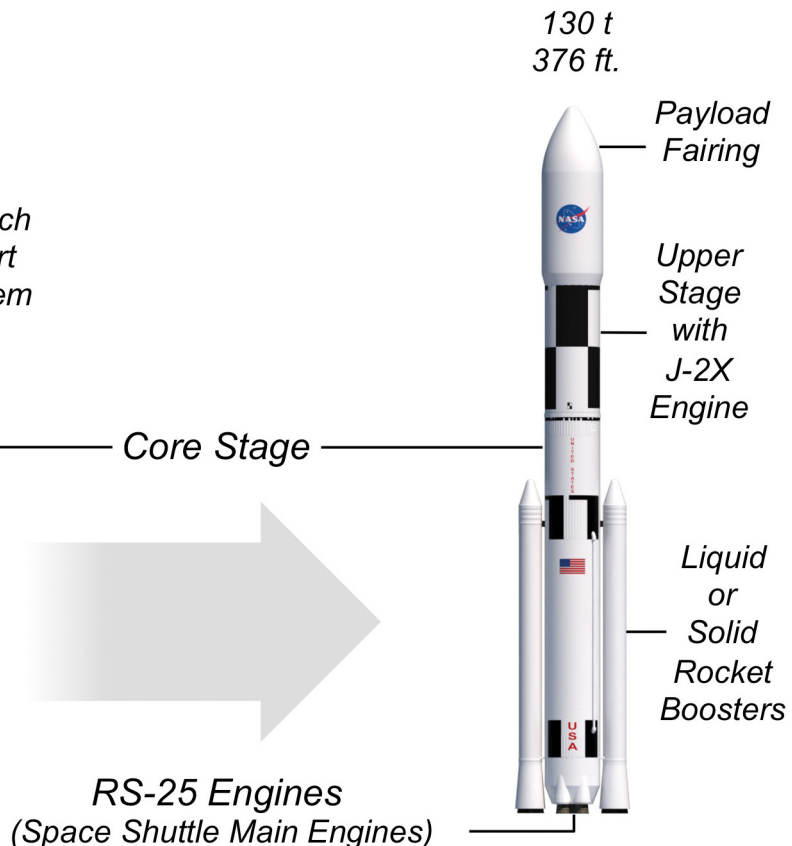

### **SLS Initial Lift Capability - 70 metric tons (t)**

*More than double any operational vehicle today  
(Crew Configuration Shown)*

### **SLS Evolved Lift Capability - 130 t**

*More than any past, present or planned vehicle  
(Cargo Configuration Shown)*

# 70 t

# 130 t

## Liftoff Weights & Sizes

**Weight: 5.5 million pounds**

- Equivalent to 7.5 fully-loaded 747 jets

**Height: 318 feet**

- Taller than the Statue of Liberty

**Weight: 6.5 million pounds**

- Equivalent to 8.8 fully-loaded 747 jets

**Height: 376 feet**

- Tall as a 37-story building

**Cargo Volume:**

- Could carry 9 school buses

## Payload

**70 t (154,000 pounds) to orbit**

- 77 one-ton pickup trucks' worth of cargo
- Equivalent of 12 fully grown elephants

**130 t (286,000 pounds) to orbit**

- 143 one-ton pickup trucks' worth of cargo
- Equivalent of 22 fully grown elephants

## Thrust/Power

**At liftoff, the 70 t configuration has 8.4 million pounds of thrust, more than 31 times the total thrust of a 747 jet.**

Produces horsepower equivalent to:

- 160,000 Corvette engines
- 13,400 locomotive engines

10 percent more thrust than the Saturn V at liftoff

**At liftoff, the 130 t configuration has 9.2 million pounds of thrust, more than 34 times the total thrust of a 747 jet.**

Produces horsepower equivalent to:

- 208,000 Corvette engines
- 17,400 locomotive engines

20 percent more thrust than the Saturn V at liftoff

## Propulsion

**Solid Rocket Boosters (SRBs)**

- If their heat energy could be converted to electric power, the two SRBs firing for 2 minutes would produce 2.3 million kilowatt hours of power, enough to supply power to over 92,000 homes for a full day.
- Each burns 5 tons of propellant per second.

**RS-25 Engines for Core Stage**

- The power generated by 3 RS-25 engines is equivalent to the output of 12 Hoover Dams.
- If 3 RS-25 engines pumped water, rather than fuel, they would drain a family-sized swimming pool in 25 seconds.

**J-2X Engine for Upper Stage**

- One J-2X Engine produces the equivalent power of 2 Hoover Dams.
- One J-2X engine uses 217 gallons (821 liters) of propellant per second.

National Aeronautics and Space Administration
